

6 Signs Change Parenting

Parents of signing children have long known the immense joy and relief experienced when their tiny 6 month old signs "food" after 10 minutes of high pitched screaming in the car.

Pre-verbal children have the capability to comprehend speech well before their vocal cords develop. Sign language takes away the developmental gap between the ability to communicate and the ability to speak! PLUS studies across the world are conclusive, signing babies perform better at school, have higher IQ's, bond more with parents and develop faster!

To help everyone access this beautiful and beneficial language images of Australian signs for over 4000 words, plus lots more including sign classes across Australia are free at www.signswap.com.au
